

SMCNA Stud Dog Statistics

The data used for the SMCNA Stud Dog Statistics was taken from the Sire Progeny Report, NAVHDA Test Results, and the SMCNA Dogs Approved for Breeding Report. The information regarding the number (#) of puppies sired by the dog and the number (#) of litters covers puppies born from 1974 through 2007. The number (#) of puppies tested in NAVHDA Natural Ability (NA) tests, the average NA scores of those puppies who tested, and the percentage (%) of the puppies tested compared to the total number of puppies sired are from the NAVHDA Test Results from 1974 through 2008 to show how the puppies born through 2007 scored in the NA test.

# of Pups	# of Litters	Sire's Name	Birthdate	Deceased	Semen Available	Hip Score	# of pups NA Tested	Average NA Score	% of Pups tested
